Accessibility statement

DiliTrust is committed to ensuring digital accessibility for people with disabilities.

This accessibility statement applies to DiliTrust iOS version 3.1.

COMPLIANCE STATUS

The DiliTrust iOS application version 3.1 is partially compliant with WCAG 2.2 Level Double-A (AA) due to the non-compliances and exemptions listed below.

TEST RESULTS

The compliance audit carried out by ipedis reveals that **50% of the WCAG 2.2 criteria are met**.

NON-ACCESSIBLE CONTENT

The content listed below is not accessible for the following reasons.

- **Information and relationships**
  Certain semantic relationships are not correctly conveyed to assistive technologies, making it difficult for VoiceOver users to understand the content.

- **Logical sequential order**
  The navigation order is not always coherent, which can disrupt the experience for users navigating with VoiceOver or an external keyboard.

- **Sensory characteristics**
  Some instructions rely solely on visual characteristics (shape, color, position) without alternatives for users with sensory impairments.

- **Orientation**
  The application does not always adapt properly when switching from portrait to landscape mode, making certain content inaccessible.

- **Use of color**
  Some information is conveyed solely through color, without textual alternatives or additional indicators, which can be problematic for colorblind or visually impaired users.

- **Contrast (minimum)**
  Some text does not provide sufficient contrast with its background, making reading difficult for people with low vision.

- **Contrast of non-text elements**
  Icons, buttons, and other interactive elements have insufficient contrast, reducing their visibility and usability.

- **Text resizing**
  The application does not support the iOS "Larger Text" option, making certain texts unreadable when users increase the font size.

- **No keyboard trap**
  Some interactive elements do not allow for an easy return, potentially trapping users navigating with a keyboard or VoiceOver.

- **Focus order**
  Focus is not always clearly visible or logically restored, complicating navigation for VoiceOver users.

- **Labels or instructions**
  Some input fields lack accessible labels or clear instructions, making them harder to understand for screen reader users.

- **Error suggestion**
  When an error occurs in a form or input field, no suggestion is provided to help the user correct it.

- **Name, role, value**
  Certain interactive elements (buttons, links, controls) lack accessible names, preventing VoiceOver from announcing them correctly.

- **Status messages**
  Status messages (confirmation, error, loading) are not properly conveyed to assistive technologies, leaving users without feedback on their actions.

DEROGATIONS FOR DISPROPORTIONATE BURDEN

No derogation identified.

CONTENT NOT SUBJECT TO THE OBLIGATION ACCESSIBILITY

No content identified.

PREPARATION OF THIS ACCESSIBILITY STATEMENT

This statement was made on 11/03/2025.

FEEDBACK AND CONTACT

If you are unable to access any content or service, you can contact the website manager to be directed to an accessible alternative or to obtain the content in another form.
